

Creo® Flexible Modeling Extension

FAST, FLEXIBLE 3D DIRECT EDITING

The Creo Flexible Modeling Extension (FMX) is an industry-defining add-on product to Creo Parametric. For design engineers who need all the power of a parametric 3D CAD solution along with the utmost flexibility to make changes to any model, Creo FMX provides the ideal solution: an easy-to-use, fast and powerful set of geometry editing tools that enables them to make the changes they want—without losing any design intent.

Engineering teams need to respond to many challenges when developing products, especially in a dynamic, competitive environment. Design engineers must respond quickly to project or bid proposals, rapidly generate design concepts or make late-stage changes to the product based on customer or supplier input. To save time, you can leverage existing 3D CAD models and modify them. If you don't know how the model was built or if the model lacks design intent, the process can be time-consuming and frustrating—one that will likely require you to rebuild the model from scratch.

Creo FMX gives design engineers the ability to edit 3D CAD data using the ease and speed of a direct modeling approach, while providing the power to retain the original design intent. You can collaborate better with other engineers and work more easily with multi-CAD data and legacy data with non-existent or outdated design intent. Whether you are at the initial stages of conceptualizing a design or trying to simplify your product geometry for CAE analyses, Creo FMX gives you the right tool to complete the task most efficiently and effectively—so you can accelerate your concept design and detailed design processes.

Key Benefits

- Easy to use and learn. Intuitive, direct interaction with geometry helps you get up to speed quickly and easily edit 3D designs from any 3D CAD model
- Original design intent is preserved—and your edits are captured as features that can be further modified in the future
- Easily accommodate late-stage changes to your engineering design faster and with less frustration with this flexible modeling approach
- Work more efficiently in a multi-CAD environment by easily incorporating and editing data from other CAD systems. You can also add parametric design intent to imported data
- Faster, more flexible 3D editing increases the efficiency and productivity of detailed design and downstream product development process

Creo FMX helps you quickly edit geometry and automatically handles complex topology changes.

Creo FMX supports a broad range of use cases across the product development process. A few examples of tasks that are impacted and improved include:

- Enable rapid concept design and faster bid proposals. You can edit and iterate existing 3D design concepts faster with the fast, flexible capabilities in Creo FMX
- Modify 3D geometry faster and with more flexibility, accelerating your detailed design process
- Work faster with imported data. With Creo FMX you can edit geometry on imported data so you can work faster and more efficiently in a multi-CAD environment
- Accommodate late design changes. Creo FMX gives you more flexibility when editing your 3D CAD models so you can execute changes faster and easier
- Streamline CAE and CAM workflows. Creo FMX can help engineers simplify or edit geometries to prepare the 3D CAD models for design optimization studies, downstream simulation or NC and tooling design tasks

Select geometry faster and easier in complex parts with smart filters in Creo FMX.
